

CASAHL ecKnowledge® 9.6

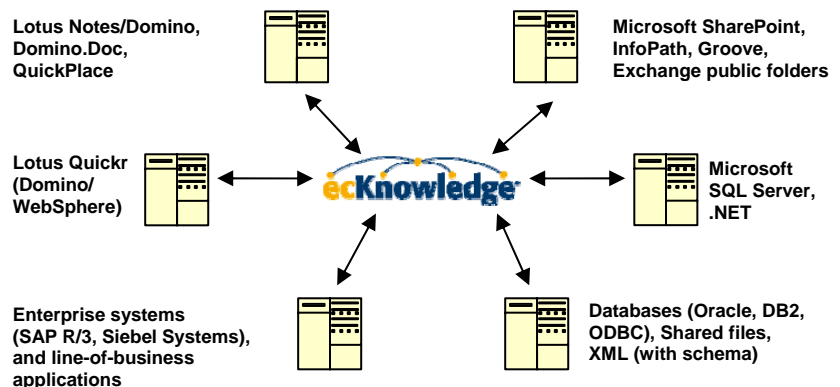

Optimizing Collaborative Applications through Integration, Extension, or Migration

In today's fast-moving business world, line-of-business professionals, knowledge workers, and executives must collaborate effectively across multiple application environments. Increasingly, companies are seeking ways to integrate or extend their collaborative applications to interact with each other and with enterprise line-of-business applications. Some companies also decide to migrate one or more applications to consolidate systems on new platforms.

CASAHL ecKnowledge® software is a powerful, yet easy-to-use tool designed specifically for rapid integration, extension, consolidation or migration of collaborative applications and data across heterogeneous environments. By capitalizing on existing systems and preferred user interfaces, ecKnowledge facilitates rapid implementation of collaborative solutions and maximizes the overall return on all of an organization's investments in collaborative applications and IT infrastructure.

CASAHL ecKnowledge can help you to:

- Integrate IBM Lotus or Microsoft collaborative applications (such as IBM Lotus Quickr, Lotus Notes and Domino, SharePoint, and Microsoft Office applications) with each other and with enterprise DBMS-based and ERP applications (such as Oracle, SQL Server, DB2, and SAP R/3).
- Extend the scope of enterprise line-of-business applications to address new collaboration-related tools or servers (such as Microsoft SharePoint, or InfoPath, or IBM Lotus Quickr services for Domino or WebSphere Portal).
- Migrate data, applications, and security access controls between collaboration platforms (for example, from Lotus Notes and Domino, QuickPlace, Domino.Doc, or Exchange public folders to Lotus Quickr for Domino, Lotus Quickr for WebSphere Portal, or Microsoft SharePoint and InfoPath or SQL Server).

For more information about CASAHL Technology and a high-level summary of ecKnowledge capabilities, see the other side of this page.

ecKnowledge® 9.6 - High Level Summary of Capabilities

- **Rich Options for Collaborative Application Integration, Extension, and Migration**
CASAHL ecKnowledge supports a full spectrum of integration, extension, and migration options – including integration of collaborative applications by means of one-way or bi-directional synchronization of data, extension of collaborative features to new environments, and one-time or incremental staged migration across platforms. Options include ad hoc, scheduled, and real-time information exchange.
- **Vast Connection Capabilities for Linking Collaborative Applications to Enterprise Data Sources**
ecKnowledge can connect directly to IBM Lotus collaborative applications (Lotus Quickr for Domino or WebSphere, Lotus Notes, QuickPlace Domino.Doc), Microsoft collaborative applications (SharePoint, InfoPath, Groove, .NET, Exchange public folders), enterprise ERP systems, LOB and database applications; and shared files stored in underlying file systems. For systems not supported directly, ecKnowledge works with an intermediate XML format to import content from virtually any system.
- **RAD Environment for Integration Application Development**
ecKnowledge comes with a wizard-based GUI development environment, designed to bridge the gap between multiple heterogeneous environments. This versatile software supports a number of sophisticated integration features, including data transformation, workflow and event triggers, business rules, error handling, and many other features – all without custom programming.
- **Generate New VS .NET or InfoPath Applications from Existing Lotus Notes or Exchange Applications**
ecKnowledge can take an existing Lotus Notes or Exchange public folder application and automatically generate the framework for a Visual Studio .NET project, with customizable C# or VB .NET code and a Web Form or Windows Form user interface. ecKnowledge can also generate InfoPath forms. Each-generated application is fully functional, with data binding to SQL Server where appropriate. Developers can edit and extend the new application as needed.
- **Easy Interaction With SharePoint and Quickr Platforms**
ecKnowledge can extend the scope of enterprise and LOB applications to new collaboration-related tools or servers, such as IBM Lotus Quickr (for Domino or WebSphere), SharePoint (WSS, SPS 2003, or MOSS), InfoPath, and SQL Server. ecKnowledge supports a wide range of SharePoint and Quickr functionality, including standard and custom lists, discussion boards, document libraries, publishing sites, calendars, tasks, wikis, and blogs.
- **Robust Server, Security, and Internet Standards**
CASAHL ecKnowledge respects existing enterprise security infrastructures, including systems and application-level authentication and authorization mechanisms. The scalable ecKnowledge Server includes automatic load balancing and failover protection. No additional software is required on the network, and no changes are required to existing applications, in order to work with ecKnowledge.

About CASAHL Technology

CASAHL Technology, Inc. provides software to integrate, extend, or migrate collaborative applications and data between Microsoft, IBM Lotus, and enterprise line-of-business applications. Over 1,500 organizations have employed CASAHL solutions since the company's founding in 1993. For more information or to register for a free live webcast demonstration, visit www.casahl.com, email info@casahl.com, or phone 925-328-2828.
